

# Our proficiency in the contemporary workplace

The portfolio of the dataglobal Group

## This is the dataglobal Group.

“The world is your workplace” – under this guiding principle the dataglobal Group provides robust software solutions for the digital workplace. With over 3,000 current clients in the DACH region and beyond, the group stands as a prominent provider in its sector. Its portfolio notably encompasses enterprise content management systems, digital document management, business process control, email security, and solutions for effective resource and personnel management.

## Document administration

Efficient, secure, and contemporary document management that provides you with complete control over your documents and business processes at all times. The DMS serves as the core of your digital workplace, enabling you to manage all company-relevant data and information while fully capitalizing on the advantages of digital transformation.

## Our areas of expertise

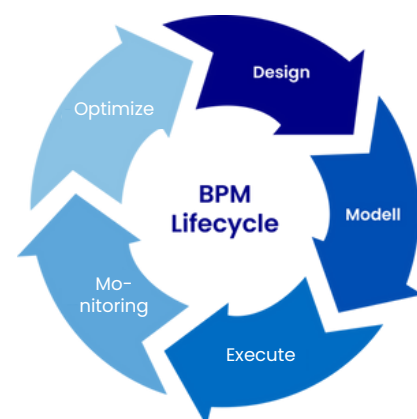

Our extensive product and service portfolio allows us to deliver robust support for companies undergoing digital transformation. We provide a wide array of solutions, encompassing digitization, secure document archiving, process automation, and dependable protection against spam, phishing, and other threats in email communication. Additionally, we offer solutions for internal resource management, such as office space and fleet management, which can be seamlessly integrated and managed within Microsoft applications. This positions us as a capable and trustworthy partner in our customers' digital transformation journeys.

## Archiving

Personnel files, supplier files, order files, contract files, and more: Choose efficient digital management for these essential documents, which are crucial for every organization. Our solution emerged as the test winner in the 2019 BARC study on electronic files, validating the exceptional effectiveness of our software for digital file management in businesses.

## Business Process Management

Business Process Management, commonly referred to as "BPM," serves as an effective solution for managing business processes through workflows. Utilizing BPM software enables the design, modification, and management of workflows with ease and flexibility. This capability allows for the complete automation of organization-specific processes governed by established rules. Typical areas of application encompass travel expense accounting, contract management, and purchase requisitions (PRP).

## Invoice management

Digital invoice processing streamlines the invoicing procedure within your organization. This software solution enables the complete digitization of the process, from the receipt of invoices to their posting, while automating various tasks.

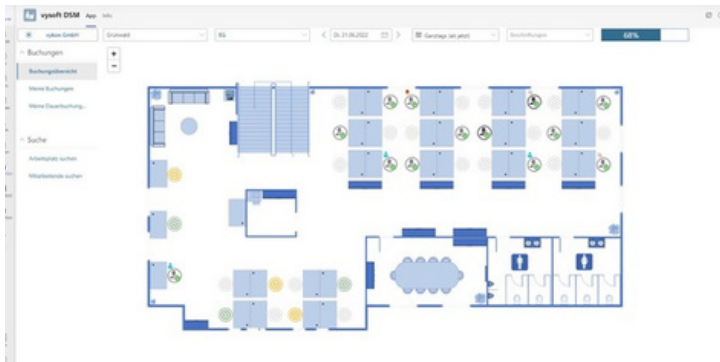

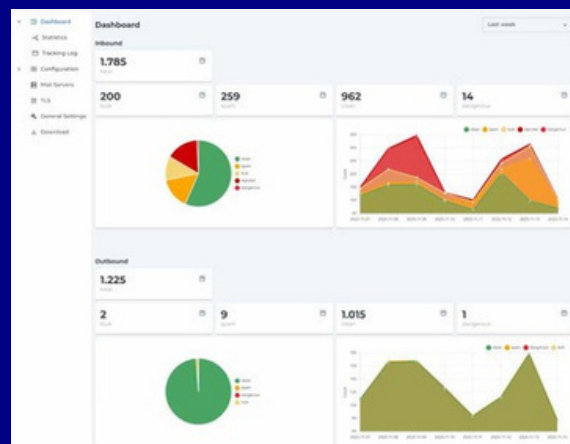

## Digital File

Personnel files, supplier files, order files, contract files, and more: Choose efficient digital management for these essential documents, which are crucial for every organization. Our solution emerged as the test winner in the 2019 BARC study on electronic files, validating the exceptional effectiveness of our software for digital file management in businesses.

## E-Mail-Security

eXpurgate is a robust anti-spam solution that provides dependable protection against unsolicited emails. Utilizing advanced filtering technology, eXpurgate identifies and prevents spam emails, phishing attempts, and other harmful content before they reach your inbox. With a spam detection rate exceeding 99.99% and the capability to analyze over 1 billion emails daily, eXpurgate delivers an exceptional level of security.

## Resource management

Whether it involves desk sharing, room allocation, vehicle fleet management, or parking oversight, our resource management solutions enable you to optimize your company's resources effectively while ensuring continuous visibility. Seamless integration into your existing Microsoft Teams environment reduces implementation efforts and guarantees maximum usability for both you and your employees.
