² Zendesk, [CX trends 2024](#), January 17, 2024

Why GenAI is a game-changer for customer and field service

Caught between shrinking budgets and expanding customer expectations, customer and field service leaders are searching for ways to deliver more value with less effort. Is there a way to upgrade experiences without increasing expenditures or burning out employees? Generative AI (GenAI) is the game-changer that can do it.

With its abilities to understand user context and intent, synthesize information, and generate content, GenAI streamlines the customer service process from beginning to end. It enables your organization to:

- **Reduce customer effort, increase customer satisfaction, and lower case volume** by helping customers self-solve issues easier and faster
- **Increase the productivity and job satisfaction of agents** by enabling them to quickly ramp up on complex cases and speed time to resolution
- **Empower field service technicians** to solve issues on the first visit with work order summarization, as well as easy access to customer information, parts required, and work order history
- **Fast-track custom app development and automation** with low code, especially when it's used on the same platform as IT operations
- **Remove unnecessary work from team queues** by automating the categorization, compilation, and assignment of work
- **Put strong data governance and cybersecurity processes in place** to roll out AI safely and responsibly across the enterprise by mitigating ever-changing technology and cyber risks through predictive intelligence

Tap into the potential of GenAI for customer service

When you marry AI capabilities with a powerful workflow automation platform, every employee in your organization is empowered to do more and do it faster. The Now Platform® in combination with ServiceNow® Now Assist, our GenAI capability, is unique. Users get deep-seated GenAI experiences and automation technologies that can not only generate content from your unstructured data, but also take action on it.

Now Assist GenAI solutions increase organizational efficiency by enabling fast, personalized customer self-service and by automating manual work for customer service agents, field service technicians, and developers of the custom apps these support professionals use. With a choice of out-of-the-box Now Assist experiences based on domain-specific large language models (LLMs) or general-purpose LLMs, ServiceNow boosts your company's agility by supporting a broad set of customer service use cases.

Read on to learn more about how Now Assist can help you transform every corner of your business with actionable GenAI, purpose-built for work.

37%

GenAI is the second most important capability cited by leaders for driving faster resolution time, reduction in customer effort, and cost savings

Source: ServiceNow, [Customer Experience Trends: Customer service insights in the GenAI era, 2023](#)

Three key areas where GenAI adds value:

Customer service management

GenAI provides instant, accurate chatbot assistance for customers and autogenerated case summaries for agents.

Field service management

GenAI can summarize work order tasks for technicians, reducing manual data entry and improving accuracy on mobile devices.

App development

GenAI speeds app delivery by creating code and app templates and automating programming, bug fixes, code refactoring, and documentation.

NOW ASSIST FOR CUSTOMER SERVICE MANAGEMENT

Create satisfying experiences for customers and agents alike

The state of customer service can often be described in a single word: frustration. When customers are unable to quickly or accurately find the answers they need through self-service channels, they're forced to escalate to a live agent. From there, they might be handed from one agent to another without accurate details, requiring them to repeat information or make multiple support calls.

On the other side, to understand a customer's issue the agent must tediously research volumes of manually entered chat transcripts, case histories, or work notes. And the summaries between agents are often inconsistent. When your agents continuously spend their time on menial and mind-numbing tasks, job satisfaction and morale will drop.

It's no wonder that 48% of enterprise leaders say improving the customer experience is one of the main drivers for implementing AI³ and of 27% leaders say AI is the capability providing the greatest reduction in customer effort.⁴

The GenAI capabilities in Now Assist can help you to dramatically improve customer interactions, streamline support processes, and boost productivity for agents. With Now Assist you can build experiences that will delight your customers and the teams who serve them.

GenAI-powered Now Assist optimizes customer service management, enabling your organization to:

- **Respond faster** when context on issues and actions taken are automatically gathered.
- **Speed up resolution** with easy-to-understand summaries for cases and interactions.
- **Improve agent productivity** through an intuitive conversational assistant.
- **Allow customers** to submit catalog requests with a natural language experience.

**NOW ASSIST FOR
FIELD SERVICE MANAGEMENT**

**Enhance and expedite
service-visit experiences**

Field service visits can be make-or-break moments that influence customers' long-term perception of your brand. But coordinating visits can be exasperating for all parties—schedulers, technicians, and customers, too.

Dispatchers must manually manage multiple technicians spread across territories, often without adequate visibility into schedules and available capacity. This results in time conflicts and rescheduled appointments that inconvenience customers.

When dispatchers don't have the information they need to match correct parts or skill sets to work orders, technicians end up making costly repeated truck rolls. Work planning can't be optimized without the ability to bundle overlapping tasks, skills, and locations.

GenAI can assist field service technicians who rely on accurate information from their mobile devices to be in the right place, at the right time, with the correct parts. Using Now Assist, they can quickly access details on a work order and parts required before a truck roll, then later recap work performed with ease using a summarization tool.

GenAI-powered Now Assist optimizes field service operations by:

- **Simplifying task debriefs** with automated work order summarization, which reduces manual data entry.
- **Enhancing data entry** on mobile devices, ensuring a seamless and efficient user experience for field resources.
- **Increase process adherence and data accuracy** with task summarization across activity streams, parts, and incidentals.

**GenAI-powered ServiceNow

NOW ASSIST FOR CREATOR

Speed app development and automation

GenAI can vastly improve the productivity of experienced developers and lower the barrier of entry for citizen developers who are just starting to use intelligent automation and low-code development. That's why ServiceNow is taking the lead in using GenAI for development with Now Assist for Creator, and we are introducing new GenAI capabilities that are built in, not bolted on.

Simplifying development steps

Every organization writes scripts, generates flows, creates playbooks, and updates service catalog items, and Now Assist for Creator can simplify the steps. For example, you can automatically generate service catalog items using GenAI to easily grow your portfolio business and IT services. You can also create playbooks in seconds to accelerate workflow development.

Each organization also has unique processes that aren't covered by out-of-the-box solutions. Now Assist for Creator radically simplifies the creation of custom ServiceNow apps and workflows for every type of developer, expediting delivery and making optimal use of available development skill sets. It allows anyone to get a head start at building apps in a fully governed environment through conversational chat with a virtual assistant.

Empowering developers of all skill levels

With Now Assist for Creator, developers of all skill levels can build apps swiftly with advanced text-to-code capabilities, and they can easily automate a new process just by describing what it does. Now Assist untethers experienced coders with embedded code completion and comment-to-code capabilities, which reduce tedious, repetitive coding tasks and lower debugging efforts by eliminating manual syntax errors.

The result? Developers end up with more time to focus on innovation and strategic thinking.

Accelerating development of field service apps

TRIMEDX needed a way to support growing business operation needs, without having to hire additional developers at the same rate.

The company was also looking for AI that could drive efficiency for their technicians. Now Assist enhanced developer productivity in building use cases for summarizing work order tasks and resolution notes. It also expedited knowledge article generation to retain the experience of tenured technicians.

"If we can shave two to five minutes off each of our 2.5 million annual work orders, you're talking hundreds of thousands of hours saved."
 Brad Jobe, CEO, TRIMEDX

22% increase in developer productivity

50% of developers actively using Now Assist in just 3 months

Increase in number of citizen developers as they learn best practices from Now Assist

Automate app development with Now Assist for Creator, our out-of-the-box GenAI

According to Gartner, “Generative AI code generation has the potential to revolutionize software development workflow and the developer experience.”⁵ ServiceNow can certainly make the case that these GenAI capabilities delivered in Now Assist for Creator qualify as revolutionary:

- **Flow generation:** Offers flow authors a “soft start” with guided directions for process flows using natural language statements to create and modify a flow and subflow skeleton.
- **Code generation:** Enables developers of all skill levels to write natural language comments that are automatically translated into actual code/flow suggestions; empowers pro developers with intelligent code completion recommendations when they start typing a line of code.
- **Playbook generation:** Allows playbook authors to create complete workflow playbook outlines in seconds just by describing what they want the playbook to do, instead of spending hours manually crafting it.
- **Service catalog item generation:** Accelerates self-service rollout by allowing developers to quickly create catalog items—complete with professional descriptions and questions—based on a natural language description of what they want the catalog item to do.
- **Conversational app generation:** Lets developers collaborate with a virtual assistant to create custom, foundational applications through a natural language chat; they simply outline their business processes to streamline preliminary development.

Using Now Assist for Creator, you can jump-start innovation and deliver more value faster. By increasing the efficiency and output of your experienced developers and tapping into a vast new pool of citizen developers across your organization, you extend the benefits of digital transformation to every part of your business—making it more efficient, agile, and competitive.

Build trust in GenAI initiatives and accelerate value delivery

Rolling out AI responsibly requires a good risk-based strategy. This includes staying on top of compliance, monitoring for emerging risks (such as hallucinations), and implementing strong data governance processes to provide assurance to customers and stakeholders. Leaders are also concerned about justifying investments in GenAI. In fact, about 70% of companies lack a cohesive strategy and roadmap for implementing AI.⁶

Use a single source of truth enterprisewide

A single source of truth will help you manage information about the AI models that are in use and planned for use. With ServiceNow, you can easily establish a proper governance framework—not just to manage risk or compliance for AI models but also for the applications, processes, or projects that use the models. This includes management of privacy risks, data protection, and security violations. You can also respond to emerging government regulation of AI systems, with [a solution](#) that resides on a single platform with other enterprise management solutions.

Anticipate security issues through predictive intelligence

With ServiceNow, you can use machine learning and natural language processing to quickly analyze and compare records across your applications. [ServiceNow Security Operations](#) comes with built-in predictive intelligence to help you stay on top of vulnerabilities and quickly mitigate ever-changing technology and cyber risks.

Quickly implement GenAI projects and ensure ROI

By helping you prioritize what truly matters, [ServiceNow Strategic Portfolio Management](#) (SPM) accelerates and ensures GenAI value delivery. SPM can empower your entire enterprise to focus everyone on initiatives that align with your strategy as well as fulfill stakeholder and customer demands.

You have to move fast. You have to do it with governance. You have to do it with security. You have to do it with the right platform partner. But once you've done that, the company going the fastest is going to win the most."

Paul Smith, Chief Commercial Officer, ServiceNow

One thing keeping the C-suite up at night

of executives say they believe GenAI can harm trust of their organizations if the appropriate risk management tools are not implemented.

⁶ Frost & Sullivan, [Put AI to work for people](#), 2024

AI is only as powerful as the platform it's built on

According to KPMG, 60% of organizations view generative AI as an opportunity to drive greater efficiencies, grow market share and revenue, and gain a competitive edge.⁷ But it's the organizations placing bigger, strategic bets and striking up partnerships with select AI providers that are going to be the winners here, highlighting the value of adopting a platform-centric approach.⁸

A platform optimized for 27x speed and 12x scale

ServiceNow is uniquely positioned to blend the innovative capabilities of AI technologies with the unmatched efficiency of our world-leading workflow automation platform that's optimized for 27x speed and 12x scale. What sets the Now Platform[®] apart is our unparalleled expertise in crafting structured workflows—the backbone of processes that support compliance, precision, and predictability.

An accurate, secure LLM that runs faster and costs less

The primary GenAI strategy of ServiceNow is to leverage the domain-specific Now LLM, which runs faster, costs less, and is more accurate and secure. Plus, we are using the latest microservices to develop and deploy new LLMs faster and more cost-effectively, so our customers can scale GenAI to new use cases and accelerate ROI across their businesses. To tailor an AI-driven transformation to your unique needs, ServiceNow also allows you to bring your own LLM.

The AI platform for business transformation

ServiceNow can bring AI to every workflow across every department and industry transforming experiences, unlocking productivity, and efficiency for every end user. You can turn your AI investment into real business value in days, not months or years with ServiceNow. It's truly the AI platform for business transformation.

Now Assist and Copilot: A joint solution to propel your AI-driven business

Enterprises like yours are rapidly adopting GenAI to enhance workforce efficiency, streamline user experiences, and reduce mundane tasks. But there's a proliferation of GenAI tools with distinct use cases that lack interoperability. That means constant switching between these disparate tools—and the resulting productivity loss.

Get two leading GenAI assistants

Thanks to an ever-expanding strategic alliance, ServiceNow and Microsoft have combined their industry leading capabilities to enhance workforce choice and flexibility. The integration of Now Assist from ServiceNow and Copilot from Microsoft brings the power of these two GenAI assistants into one seamless solution.

Help your workforce where they are

That joint solution will improve productivity for our mutual customers by quickly delivering answers, deflecting manual requests for help, and automating service requests across the organization. It will intuitively interact to meet employees where they are, allowing them to get the help they need from the most relevant GenAI assistant—regardless of which platform they are in.

Watch a [demo](#) of the Now Assist and Copilot in action.
